

Find Pair

with Target Sum

{ ? }

Given an array of **sorted numbers** and a **target sum**, find a **pair in the array** whose sum is equal to the given target.

Write a function to **return the indices** of the two numbers (i.e. the pair) such that they add up to the given target.

Input: [1, 2, 3, 4, 6], target=6

Output: [1, 3]

The numbers at index 1 and 3 add up to 6:

$$2+4=6$$
